

Enhance Your Smile. Enhance Your Life.

Excellence in cosmetic and restorative dentistry demands artistic talent, an eye for precision, and a dedication to providing each patient with customized care.

“**S**mile makeovers are my forte, and each begins with an evaluation of the overall oral health of my patient,” says Dr. Dailey, whose wisdom and compassion are lauded by his patients. “If there is an issue, such as gum recession, needing to be addressed, we will tackle that first before moving on to the exciting part of designing a beautiful smile, one that generates more smiles every day.”

At Smile Dailey, you have access to the latest preventive treatments and advice, meticulous cleanings, endodontics (root canals), periodontics (gum treatment), dental implant placement, and TMJ (jaw joint) care. Dr. Dailey’s dedication to both functional and aesthetic results comes to the forefront when he designs crown and bridge restorations, porcelain veneers, or tooth

alignment with invisible braces.

“As you age, your teeth show wear, including loss of height,” Dr. Dailey explains. “This adds to the lines on your face while aging your smile. A carefully planned smile makeover is also a smile ‘lift.’”

“I believe your brain is happier when you smile more, and your personality is brighter,” he adds. “I want my patients to hear, ‘Oh, you have a beautiful smile.’”

A range of popular cosmetic enhancements, including teeth whitening and injectables that further erase the marks of age, offers additional polish.

Receding gum line? Good news.

Staying on the front line of advancements in dental medicine is another passion of Dr. Dailey’s. A leading-edge

Dr. DJ Dailey III

Voted Arkansas’ Best of the Best Cosmetic Dentist 11 consecutive times in the Arkansas Democrat-Gazette’s Readers’ Choice Awards.

procedure he recently brought to his practice is the Chao Pinhole® Surgical Technique to restore a receding gum line. Developed by renowned California dentist Dr. John C. Chao, under whom Dr. Dailey studied to learn this breakthrough technique, it replaces the need for a scalpel, two surgical procedures, and painful grafting of tissue from the palate.

“Receding gums are both an oral health and an aesthetic problem,” says Dr. Dailey. “I am excited to be able to offer this new procedure—one that is so very gentle for the patient. It requires just a tiny pinhole to repair shrinkage. The gums are then stabilized with a special collagen material. Great cosmetic outcomes. Smiling patients.”

“Thanks to Dr. Dailey I have a younger and more vibrant smile!”
